ALKALINE CONTROL

ALKALINE CONTROL is a highly alkaline product free from carbonate content used for monitoring the A of re-circulating industrial cooling water systems. It contributes the alkalinity level without releasing carbon dioxide thus reduces corrosion problems in cooling water systems.

ALKALINE CONTROL enhances the total reaction of ions with calcium hardness of water to achieve required pH level.

PROPERTIES

Appearance : Clear colorless liquid

SG : 1.30 +/- 0.05

pH(1%) : 12.00- 13.00

Foam : Nil

Solubility : Completely miscible in water

USAGE : Dose in the initial bath setup to level the free Alkaline pointage.

PACKING : 30kg
